# Group Task: Team Portfolio Project

**Goal:** Create one website for your team that showcases your group as a whole, like a mini agency or team portfolio.

The site should demonstrate:

- A clear layout system (Grid and Flexbox)

- Semantic HTML structure

- Some DOM manipulation for interactivity

**What You Need to Do**

**1. Create the Team Portfolio Website**

Your website should include **these sections**:

1. **Header / Navigation**

    - Team name or logo

    - Navigation links to each section (e.g., Home, About, Projects, Members, Contact)

2. **About the Team**

    - A short paragraph describing who you are as a team

    - The tools or skills you use (e.g., JavaScript, Php, Python, Java, etc.)

3. **Team Members Section**

    - A card or profile for each member (photo, name, short role/description)

    - Must use a **consistent layout** (e.g., Grid or Flexbox)

4. **Projects Section**

   ○ Show sample projects or mock work your team has done (even fictional ones)

   ○ Each project should include a title, short description, and image or icon

5. **Contact Section**

   ○ A simple contact form (name, email, message)

6. **Footer**

   ○ Copyright and any social media links

## 2. Use a Layout System

● Use **CSS Flexbox** or **CSS Grid** for your layout

● Keep spacing, colors, and font styles consistent across the site

   Example:

   ● Flexbox for the navigation bar

   ● Grid for the team member cards

## 3. Apply Semantic HTML

Use correct and meaningful tags:

● <header>, <nav>, <main>, <section>, <article>, <footer>

● Proper heading levels (<h1> for site title, <h2> for section titles)

**4. Add Simple DOM Manipulation (JavaScript)**

Add **at least one small feature** that changes text or content dynamically.

Examples:

- A **button** that changes the heading text (e.g., "Meet Our Team" → "Awesome People Behind the Work")

- A **button** that updates a slogan or greeting message dynamically

- A **click event** that reveals a hidden quote or motto

- A **hover or click** that replaces placeholder text with real info

**5. Presentation**

You will present your **Team Portfolio** in front of the class (projected on TV).

During the presentation:

- Introduce your team

- Walk through the sections of your website

- Demonstrate your DOM manipulation feature (explain what it changes and how)

# Team Portfolio Project – Evaluation Criteria

| Criteria | Description | Points |
|---|---|---|
| **1. Layout System** | - Proper use of **CSS Grid** or **Flexbox** for page layout<br>- Clear visual structure (header, sections, footer)<br>- Consistent spacing and alignment | 30 |
| **2. Semantic HTML** | - Correct use of HTML5 semantic tags (header, nav, main, section, etc.)<br>- Proper heading levels and alt attributes<br>- Clean, readable, well-organized HTML | 25 |
| **3. Basic DOM Manipulation** | - Includes at least **one working JavaScript feature** that changes text or content dynamically<br>- Uses simple, correct DOM methods (querySelector, textContent, etc.) | 15 |
| **4. Team Presentation** | - Each member participates in the presentation<br>- Clear explanation of layout and DOM feature<br>- Shows confidence and understanding during the presentation | 20 |
| **5. Design & Creativity** | - Visually appealing color scheme and typography<br>- Clean and organized layout<br>- Shows originality and team effort | 10 |
